

Aves del Sur

Single Vineyard Wines. Handcrafted from Scratch.

The great natural diversity of Chile is expressed in many ways: the climate, the landscape, the soil and the great variety of birds that fly over the country.

Aves Del Sur wines have been created as a tribute to make them known and stand out.

Each wine strain is represented by a different species in three natural attitudes, which show their free spirit, their fine gestures and their daily flight over our land, in the same way that each of our wines expresses their unique identity in each bottle.

The Vineyard characterized by high temperatures during the summer. With a permanent penetration of winds from the coast in the afternoon and at night, which cool the valley and allows a high thermal amplitude for the cultivation of red varieties, late ripening and high need for thermal accumulation.

The varieties of this vineyard stand out for their high level of maturity and quality attributes.

It has granitic soils with variable slopes, of medium to low fertility, medium vigor potential with frank textures.
